

**MyBeeClub™** after School Program is centred on Early Literacy Development, Fine Arts, Communication and Personality Development program which are vital skills for young children between the age group of 3.5 to 12 years. These programs are not aimed at building superficial knowledge, but employ unique and creative techniques to establish strong foundations for each child to become responsible, sociable, intelligent, confident and successful individuals.

## Foundation Programs

At My Bee Club, we take a scientific approach to understand the learning styles of each child and the way their brain functions using cognitive psychology. There are three types of learning styles based on sensory perception; visual, auditory, and kinesthetic. We perform individual assessment to gain insight into areas that the child needs to be nurtured and maximise learning using cognitive science

A panel of psychologists and educationalists with 2 decades of brain-based education, research and experience in nurturing young children both in the USA and India, designed a well conceived standard for child's outcomes', curriculum content and teacher preparation. Our teaching practices are evidence-based, integrated with all domains of learning. We study each child's skill level to design a personalized teaching experience.
